

Forest School News Term 2: 2016

Inspired by their space topic, Maple class created space stations and rockets in Mike's Meadow this term using tarpaulins and natural resources. Gravity paths have been cleared to keep our feet firmly on Planet Earth and the children have all successfully completed space missions involving trails around the site, making structures with natural materials and hatching alien eggs... The class has experienced the change in season from a beautiful sunny Autumn to chilly Winter, and witnessed the transformation of the site as most of the leaves and temperature have dropped. The children have all been practising making sparks with flint and steel, firelighting and cooking over the campfire. A thriving trading scheme has evolved where natural materials are exchanged and shops have opened up, linking everyone's stories and ideas.
